

ACS approved program

Students who wish to pursue research related careers (medical, chemical, industrial) should consider taking the courses which will complete the ACS approved programs. Students completing these additional requirements are awarded a certificate by the American Chemical Society documenting their status as professional chemists and are frequently given preferential treatment as candidates for professional positions. Additionally, a chapter of Student Affiliates of the ACS is active at The Citadel. In order to qualify for this distinction, students must take CHEM 315, CHEM 460, MATH 131 (instead of MATH 106), MATH 132 (instead of MATH 107), and MATH 234 (as an elective course).
